<u>CYBERSECURITY SERVICES PAGE</u>

Cybersecurity Done Exactly Right

Unlike other managed security services providers (MSSPs), we focus on cybersecurity strategy and processes first, and then shift the attention to tool selection. To prevent the ever-increasing onslaught of cyberattacks, we have strategically designed our 24x7 proactive Security Operations Center (SOC) to function as an integral part of your cybersecurity program.

Our highly skilled and certified SOC engineers tirelessly hunt down and proactively eliminate threats, constantly on the lookout for ways to improve your security posture.

Security Operations Center: Build or Buy?

Building your own SOC comes with many challenges:

- Demands for qualified SOC engineers outstrips supply
- Significant costs in around-the-clock security coverage
- Rapid changes in the cyberattack vectors
- Security tools implementation

By partnering with ExactlyIT to handle your security services, these challenges are eliminated.

With our relentless focus on cybersecurity strategy and process, we advise our customers on gaps that may exist in their cybersecurity program and then eliminate those gaps.

A Scalable and Flexible Cybersecurity Platform

Effective cybersecurity is about understanding your risk profile first, and then mitigating cyber risk across your entire organization. By flexing the ExactlyIT platform, we can easily meet your needs for today while ensuring you're prepared for the threats of tomorrow.

This is cybersecurity done right.

The ExactlyIT Suite of Cybersecurity Services:

- **Cybersecurity Risk Assessments**: concise roadmaps for every stage of the cyberthreat lifecycle tailored for your organization
- **Chief Information Security Officer (CISO) Staffing**: responsible for your entire organization's data security according to effort
- **Ethical Hacking Services**: perform ethical hacking attempts of your IT infrastructure to proactively identify vulnerabilities and remediate them before any cyber attacker is successful.
- **24x7 SOC Service**: the hub through which to all our cybersecurity services are delivered to you in a consistent, cost effective, and scalable way

- **Endpoint Detection and Response Services**: manage your desktop and server endpoints using **CrowdStrike**
- **Secure Internet Gateway Services**: DNS filtering for your desktop and server endpoints using **Cisco Umbrella**
- **Security Information and Event Management Services**: manage log alerts from your Azure AD identity access attempts and other system-based log files using **Azure Sentinel**
- **Vulnerability Management Services**: perform vulnerability scans on your IT infrastructure as well as manage the resulting remediation programs using **Qualys**
- **Intrusion Detection and Prevention System Services**: deploy and manage your IDPS systems using **Cisco Firepower**
- **End-User Client and Server Deployment and OS Patch Management Services**: manage your desktop, mobile device, and server OS patching using **Microsoft Endpoint Manager.**
- **Identity Access Management Services**: manage your IAM based on **Azure/Microsoft AD** and Multi-factor Authentication (MFA).
